

# Task: View a game's updates and then install.

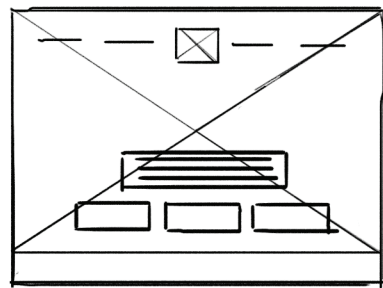

## Desktop ver.

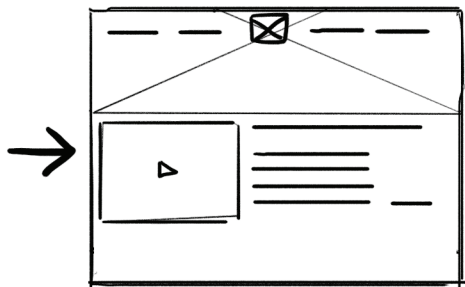

From the home page, see game update notices on the right side.

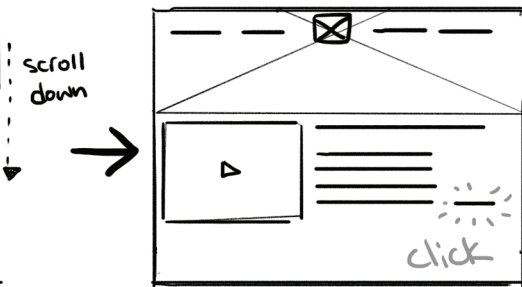

Click the update or news article of interest.

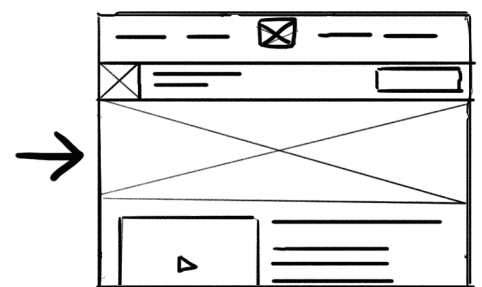

Arrive at landing page of game. Install options and marketing blurb on bottom.

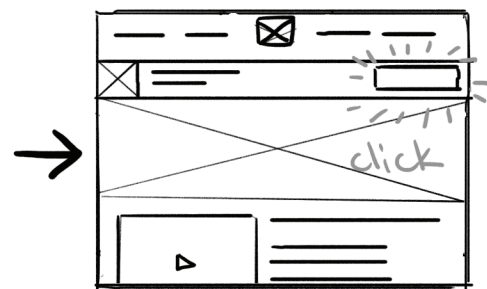

Scroll down past and arrive at a summarized news post, playable video inline with post preview.

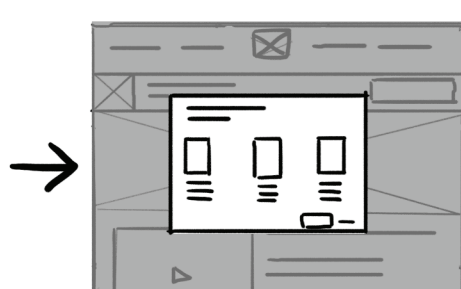

Hit the "read more" button to enter the full news post.

Splash graphics, and small "install now" bar near the top. The entirety of the news content can be viewed by scrolling down.

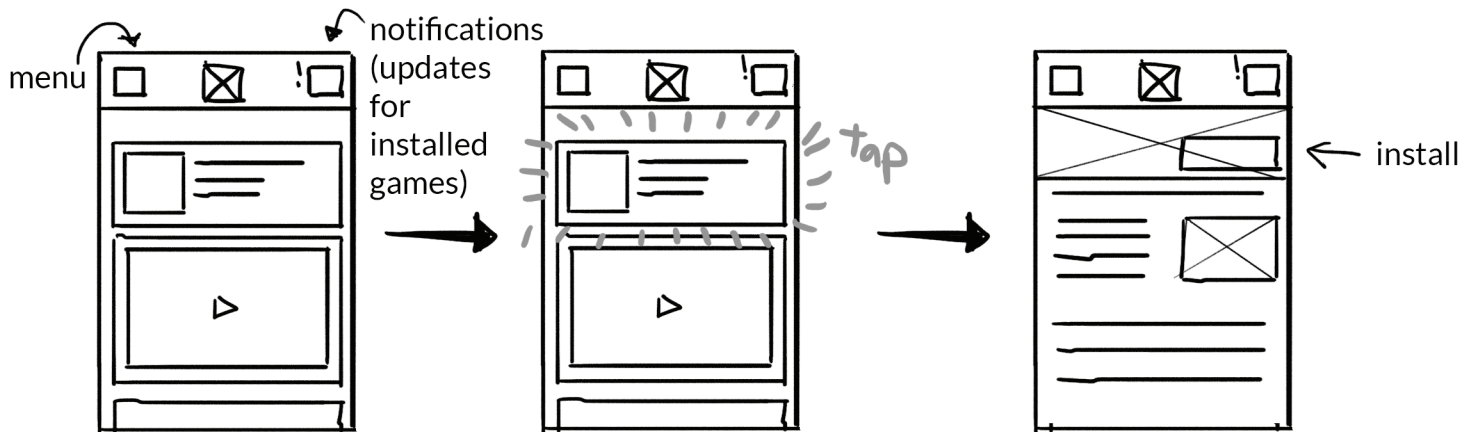

Click the "install now" bar to get the app or game download.

Select the device to continue, taking the user to the appropriate app store page.

# Task: View a game's updates and then install.

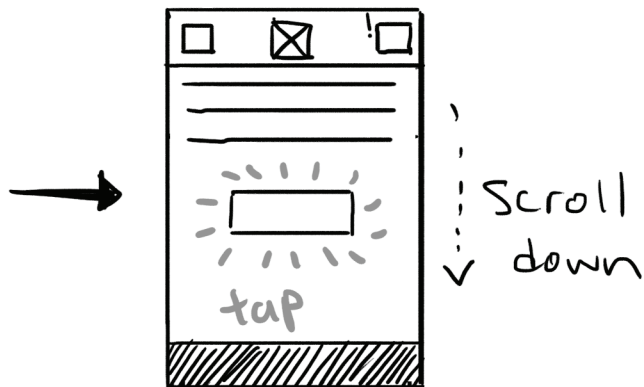

## Mobile ver.

Mobile version showcases a news-feed serving updates, news, and media.

User clicks an article on the news feed.

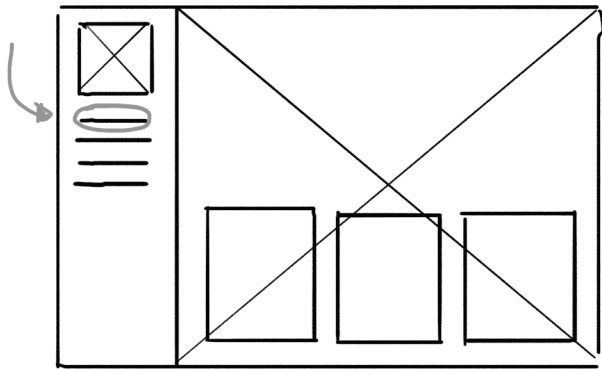

Arrives on the article. At the top along a banner is an install option.

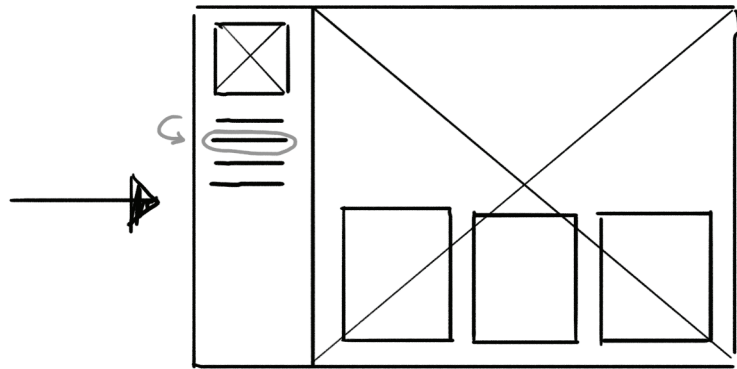

Another option to install is at the end of the post. Hitting either opens up the app store.

# Task: View a game's updates and then install.

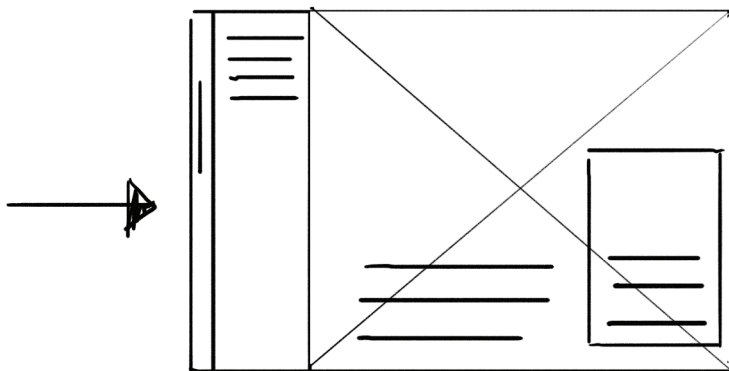

**TV ver.** Since the games have not been made for TVs, it is not possible to install the app.

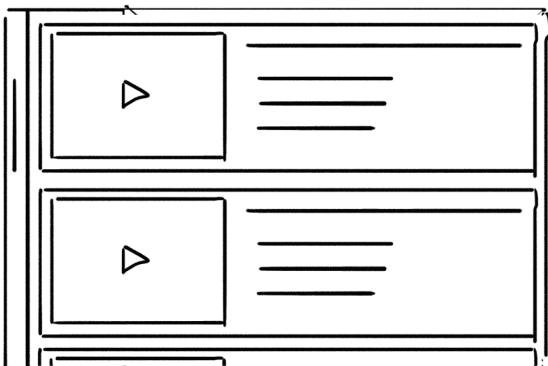

The TV browser mainly navigates through a menu on the left side of the screen. The "HOME" category is automatically selected.

By switching to the GAMES category, the user can view various games' "landing page", which changes automatically like a slideshow.

Going in one level reveals a list of games to browse. On the left hand side, the menu keeps track of one layer of navigation, functioning as a "Back" button.

After clicking into a game, the user can view posts and play videos related to the game. Scroll vertically to select a post and go in.

The popped out post can be scrolled vertically, and the user can return anytime to the list of posts via left bar menu.
